

Protégé's Unique Capacitive Configurable Updateable Button Agent

Borg's Protégé Series of in-wall touch-controllers offer unique capacitive buttons on each acrylic bezel as part of a comprehensive Button Agent application. This app allows integration of **Content + Communication + Control + Carbon Management** for one touch, centralized access to all systems and services within a facility.

Or the Button Agent offers an application as the ONLY dedicated application in full-screen kiosk mode including Internet Explorer without the URL and scroll bar.

Or much more. See below.

Launch, Toggle between applications – Set Kiosk and Power modes – Keyboard – Hot Keys

Button Monitor Features

- Any Button can launch an applications or IE to a preset page i.e. BBC News
- Select a URL to launch as a full-screen home page upon bootup
- Set IE to locked down kiosk-mode – great for web device control
- Add sound to button presses, if desired
- Power down manually if desired.
- Deactivate Buttons altogether for passive display mode
- Monitor Button activity from custom applications through the GPIO
- Power-saving screen saver timer now with content options
 - Digital photo frame from local or network photos
 - MP3 player random or list local or network
 - News ticker
 - Localized weather
 - Calendar and clock
- Auto update feature for the latest releases – nice!

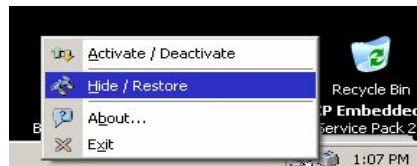

Factory Default Settings

Button 1 turns the screen off/on (manual screen-saver)

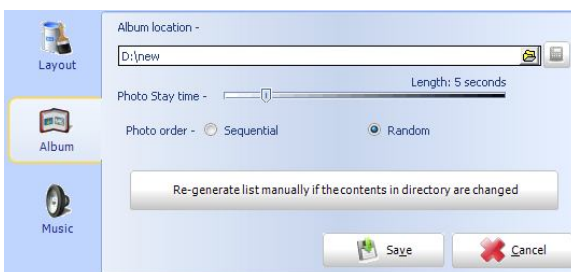

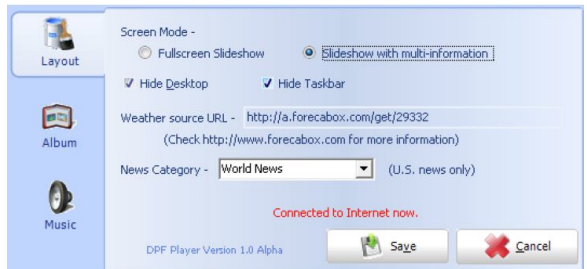

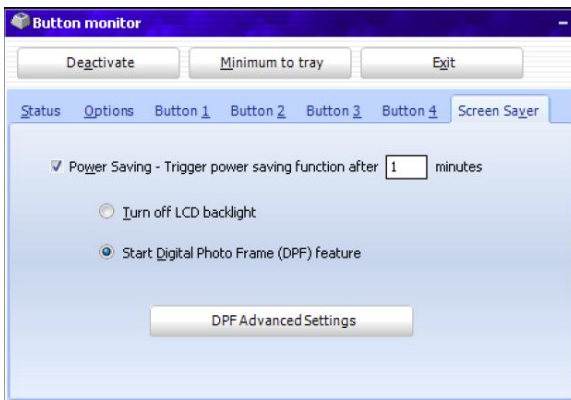

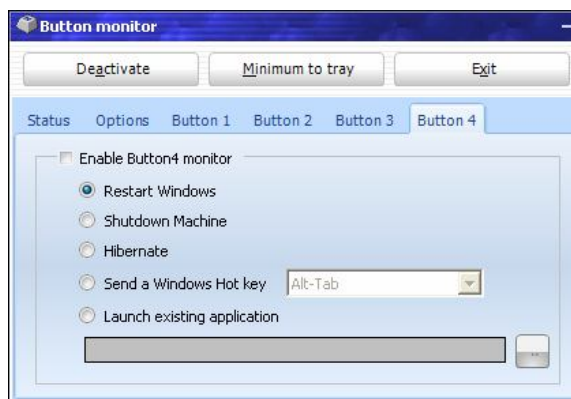

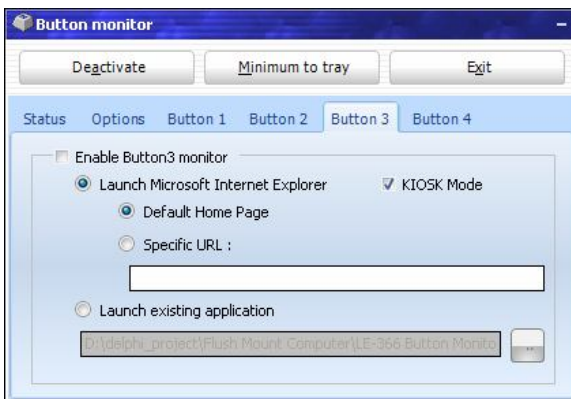

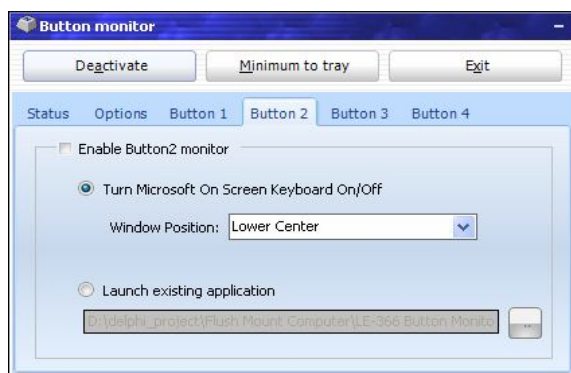

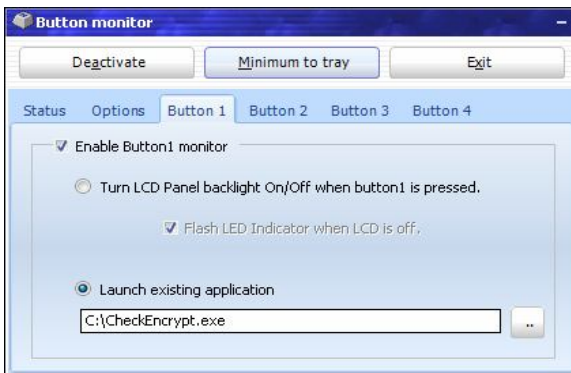

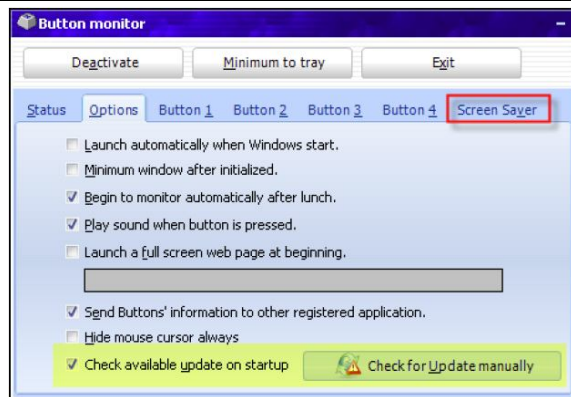

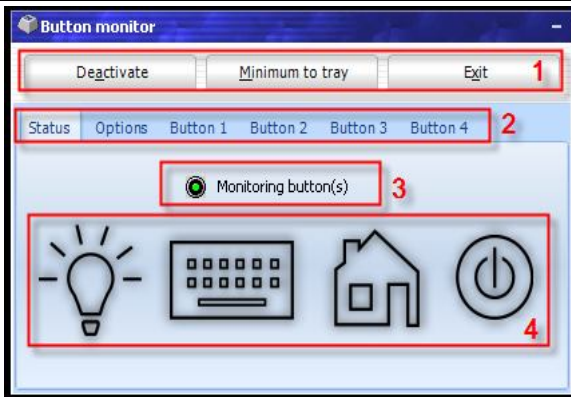

Button 2 activates the keyboard in browser mode

Button 3 goes to the Borg home page

Button 4 held for 5 seconds will power down/up the screen manually.

The Button Agent can automatically launch upon bootup or be hidden
